About Starline Castor Wheels

At Starline Castor Wheels, we are a globally recognized leader in castor wheel manufacturing, dedicated to producing high-quality castors and wheels that cater to your specific needs. Our extensive range of castor wheels serves a wide variety of industries, including medical, industrial, and commercial sectors, all designed to uphold the highest standards of quality and durability.

Our product line spans from 1-inch to 8-inch castor wheels—and beyond—offering every material, size, and fitting you might need. Additionally, our wheels are fully customizable with options for frame and wheel bearings, finish types, and accessories like brakes and direction locks to ensure they meet your precise specifications.

Our team is composed of skilled and passionate professionals committed to excellence in both product and service. At Starline Castor Wheels, we're not only invested in manufacturing superior products but also in building strong, lasting relationships with our clients through exceptional service and dedication.

Quality In Motion

Customer trust is our most significant asset, built on our dedication to quality and reliability. Our fully integrated operations and "Made in India" production enable us to oversee every aspect of manufacturing.

We maintain high quality standards through advanced management systems, cutting-edge automated production and testing technologies, and thorough inspections of both initial and final products.

Our testing laboratories are equipped with a range of facilities, including rotating test benches that handle loads up to 10 tons, along with various other material testing equipment.

Find the Ideal Castor & Wheel for your Application

To meet your needs, we offer more than just our extensive standard range. If you don't find exactly what you're looking for, we can collaborate to create a customized solution just for you. Customization is one of our core strengths.

With a selection of 50,000 standard products, we provide effective solutions for nearly every situation. Each product boasts high quality, is maintenance-free, available for prompt delivery, and offers a long service life, as expected from Starline. Additionally, our products lead the industry in ergonomics and safety.

Our agile processes allow us to craft tailored solutions that seamlessly integrate with your products. By combining efficient mass production with flexible, small-scale manufacturing, we deliver customized solutions swiftly and cost-effectively.

Efficient and Reliable Global Shipments

You can count on exceptional reliability from all areas at Starline. Our state-of-the-art logistics center ensures top-quality deliveries, with over 50,000 different variations ,with standard products available for shipping within one or two days depending on quantity.

Selecting the optimal product

1. Determine the maximum load capacity per wheel

To determine the load capacity needed for a wheel or castor, first divide the total weight of the transport equipment, including any additional load, by the number of supporting wheels or castors. Then, multiply the result by a safety factor based on the application conditions.

$$T = \frac{E + Z}{n-1} \times s$$

T = Required load capacity per wheel or castor
E = Dead weight of the transport equipment
Z = Maximum additional weight
n = Number of supporting wheels or castors
S = Safety factor

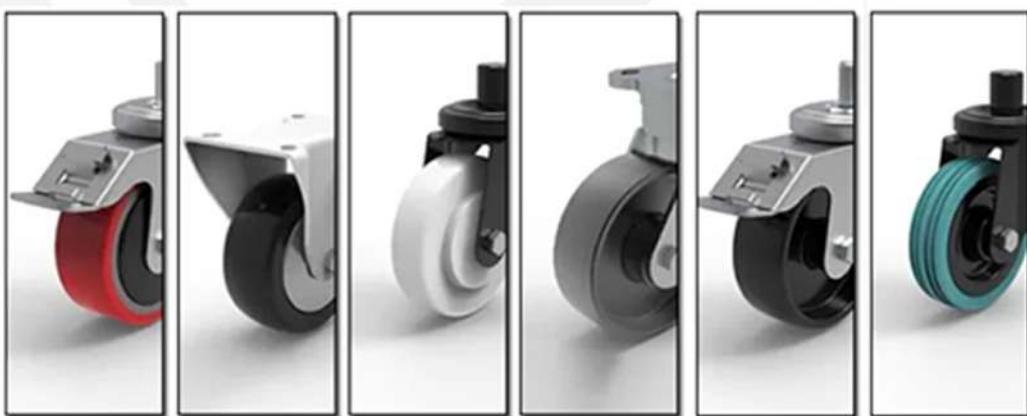

2. Starting, rolling and swivel resistance. Manoeuvrability.

The starting, rolling, and swivel resistance of a wheel or castor is mainly influenced by the tread, wheel bearing, wheel diameter, total load, and surface conditions. The maneuverability of transport equipment is affected by the number, type, and positioning of the castors used.

3. Selecting the type of material

The hardness, shape, and tread material of a wheel or castor significantly influence its operational comfort, smooth rolling, and resistance to starting, rolling, and swiveling. Generally, the tread should be softer than the surface it travels on to avoid pressing into and potentially damaging the surface.

Furthermore, the service life and functionality of a wheel or castor are influenced by how well its materials or surface finish can withstand corrosion, temperature fluctuations, and chemical exposure. Temperature and exposure duration are particularly crucial factors. Different materials offer varying levels of resistance to external conditions. Refer page 12 for more details.

4. Select Wheel Bearing Type

Choosing the right bearing depends on factors such as speed, load, environmental conditions, and the force needed to move the transport equipment.

5. Select from suitable castor and additional variations

Based on your requirement, the type of mounting for the wheel needs to be selected for attaching it to the load bearing unit. Refer to page 44 for more details.

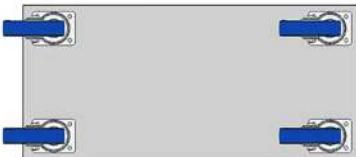

Manoeuvrability of equipment and machinery

Castors need to be strategically positioned to optimize the maneuverability and steering of units and machines. Below, various castor arrangements are described.

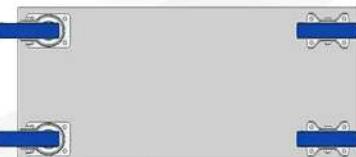

Three Swivel Castors

Ideal for light loads and narrow pathways, this transport equipment is easy to move in any direction but can be difficult to maneuver straight. Installing a directional lock on one of the three swivel castors can help, although this arrangement may increase the risk of tipping.

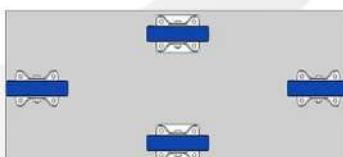

Four Swivel Castors

"Ideal for narrow pathways, this transport equipment is easy to move in any direction but can be challenging to maneuver straight. Adding directional locks to two of the swivel castors can enhance stability in straight travel.

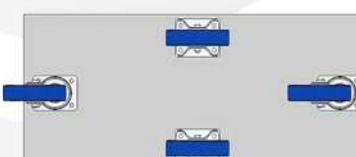

Two Swivel and Fixed Castors

The most common castor configuration, suitable for towing, allows for easy maneuverability when cornering and moving straight. However, it can be somewhat challenging to navigate in tight spaces. The fixed castor can be replaced with a wheel set, consisting of two wheels on an axle.

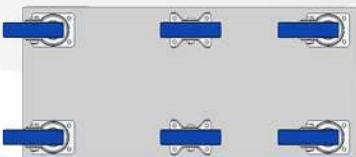

Four fixed castors, with central castors that are mounted slightly higher

This cost-effective castor arrangement facilitates easy straight-line movement. Placing the load over the central fixed castors enhances steering and rotation in place, but may increase the risk of tipping and swinging. The central castors can be replaced with a wheel set of two wheels on an axle.

Two swivel castors and two fixed castors, with fixed castors positioned slightly higher

This configuration is ideal for towing, allowing easy maneuverability when cornering and moving straight, as well as effortless rotation in place. However, it may increase the risk of tipping and swinging. It's advisable to use swivel castors with spring-loaded features, and the central fixed castors can be replaced with a wheel set of two wheels on an axle.

Four Swivel Castors and Two Fixed Castors

This complex castor arrangement is suitable for towing. The transport equipment maneuvers easily when cornering and moving straight, and it rotates effortlessly in place. It is especially effective for handling heavy loads and long units, as the fixed castors must maintain constant surface contact for optimal maneuverability. The central fixed castors can be replaced with a wheel set consisting of two wheels on an axle.

The Usage Notice of Casters

■ Application

Casters are attached to transportation equipment and other devices inside rooms and facilities, with the purpose of facilitating the relocation or transfer of cargoes, excluding people and animals, and moved by human power intermittently.

Choice of the Casters and Usage Conditions

1. Load Capacity and Adequate Load

Max Load Capacity : Upper limit for safe, smooth use for a long period of time

Adequate Load : When castors are attached to a cart (use of 4 castors), the load needs to be supported at 3 points. Accordingly, please calculate the load, assuming 80% of the maximum load, as shown in the following equation:

$$\text{Adequate Load} = \frac{\text{Max Load Capacity}}{\text{per 1 pcs (daN)}} \times 4 \text{ pcs} \times 0.8$$

2. Speed Limits

Use the castors intermittently on a flat road at less than the speed tabulated below. This is the same also for using castors for towing, and using the power of a trailer or the like. Please avoid the continuous use, which generates heat.

3. Usage Conditions

Please determine the following items, according to equipment (loading and usage conditions).

Type of Bracket : Swivel, Rigid, With Stopper, etc.

Installation Method, Material

Type of Wheel : Diameter, Material

4. Usage Environment

In general, castors are designed, assuming that they are used indoors at room temperature. Please avoid exposure to the caustic environment (Ex.acidity, alkali, sea, oil). There is a risk that products will deteriorate. If you want to use the castors at high or low temperatures, please consult with us. You would require brackets, wheels, and grease according to usage. Some materials of the wheels may stain floor surfaces.

5. Stopper

Long-term abrasion or damage may degrade the functions before you notice. In addition, hard wheels, such as nylon wheels, have less braking force, from shipment.

If necessary for safety, please take measures, such as wheel clamps and floor locks, to complement the braking performance.

■ Installation of Castors

1. Attach each castor to the fixated joint part properly with a bolt, a nut, a washer, etc. that fits the hole part for attaching, so that it will not loosen.
2. Attach each castor so that the attachment plane is horizontal.
3. Attach each swivel castor so that the swivel axis is vertical.
4. Attach rigid castors so that they are parallel to each other.

■ The Usage Notice

1. Setting Condition

Please do not use the products for any purposes other than those specified in the setting conditions, because they could place excessive burdens on castors, leading to deformation and damage.

- Please avoid overloading.
- Please avoid partial loading.
- Please do not use the castors with incorrect and unsecure fitting and installation.
- Please avoid excessive shock load (Please be cautious about the shocks from steps and loading goods).
- Please do not use the castors on a significantly uneven surface and move them across over a sharp protrusion.
- Please do not move the cart forward to the opposite direction of its rigid castors.
- Please do not place a person or animal on a cart with castors.

2. Stopper

Since a stopper may loosen unexpectedly due to a shock, please avoid the following operations.

- Please use the stopper pedal surely with the foot while wearing shoes.
- Please do not park the cart on a slope even if the caster stoppers are locked.
- Please do not move the cart when the caster stoppers are locked.
- Please do not step on the stopper pedals too hard or knock the pedals with a hammer.
- Please do not use the stopper pedal during driving.

3. Remodeling of the Product

We will not take responsibility for the remodeling, reassembly, coating, welding, and attachment conducted by you.

■ Maintenance Checkup

Deterioration, including the loosening of screws and the corrosion of parts, may occur according to usage conditions and period. Check the following items regularly.

- Whether the castor mounting part is clamped tightly
If not, clamp it again.
- Swivel Part of Swivel Castors
If you find the swaged part has loosened, replace swivel castors.
- Whether the castor/shaft part has loosened or corroded
If you find screws have loosened, tighten them. If you find corroded parts, replace the parts.
- Whether there is the abrasion or deterioration of the tire part, the corrosion of the bearing part, or the like
If you find deteriorated parts, replace the parts.
- Whether there are foreign materials in the swivel or shaft part
If there are any foreign materials, remove them.
- Whether there are any damage, cracks, or deformation
If any, replace the parts.

Castor Wheels by Materials

Castor wheels, available in all sizes, serve a multitude of purposes across various applications. Tailored to accommodate different speeds and load capacities based on specific requirements, they find widespread use in diverse fields such as medical equipment, display stands, industrial kitchen equipment, and similar applications.

Cast Iron Wheels

Built to last

Starline Cast Iron wheels have exceptional robustness, enabling them to excel in challenging environments where other wheels falter. With an impressive load capacity and temperature resistance of up to 600°C, they are ideal for demanding applications.

Nylon Wheels

Unbeatable durability & performance

These specialized Nylon wheels are resilient to high temperatures, durable, and require minimal maintenance. With a maximum temperature of upto 140°C, they offer reliable performance in various applications.

UHMWPE Castor Wheels

The ultimate choice for durability

With exceptional strength and resistance to wear, these wheels handle heavy loads with ease. Their high abrasive resistance, low-maintenance operation and non-marking design make them a top choice for industrial and heavy duty applications.

www.starlinecastorwheels.com

Rubber Wheels

Versatile for almost all applications

Rubber castor wheels provide excellent traction, noise reduction, and shock absorption, making them suitable for indoor and outdoor use alike. The flexibility of rubber enables the wheels to grip surfaces effectively, preventing slippage and ensuring stability during movement. Rubber wheels are bonded to the insert in three primary ways: pressed, clinched, and overmolded.

PU Castor Wheels

Smooth and Efficient

Starline PU Castor wheels, known for their high abrasion resistance, is designed to deliver consistent performance for your product mobility needs. Crafted from solid urethane and mechanically or chemically bonded to plastic, cast iron, or aluminium cores, Polyurethane (PU) wheels have up to a 3,000 kg capacity and exceptional impact resistance, safeguarding floors.

WH184 Series Solid UHMWPE Wheels

180 - 2,300 kg

Tread and tyre hardness

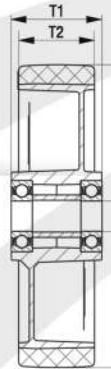

Smooth operation / floor preservation

Rolling resistance

Wear resistance

Wheel Details:

- high-quality UHMWPE, impact resistant, hardness 63 Shore D
- very low rolling resistance
- easy operation on smooth surfaces
- high abrasion resistance
- colour natural white

Other features:

- high chemical resistance to many aggressive substances
- operating temperature:
-20 °C to +80 °C,
reduced load capacity over
+35 °C

WH111 Series

Cast Nylon Wheels

900 - 11,000 kg

Tread and tyre hardness		70 Shore D
Smooth operation / floor preservation		satisfactory
Rolling resistance		excellent
Wear resistance		good

Wheel Details:

- high-quality Nylon, impact resistant, hardness 70 Shore D
- very low rolling resistance
- easy operation on smooth surfaces
- high abrasion resistance
- colour natural beige

Other features:

- high chemical resistance to many aggressive substances
- operating temperature:
-20 °C to +80 °C,
reduced load capacity over
+35 °C

Tread:

- high-quality polyurethane elastomer , hardness 92 Shore A
- low rolling resistance
- high abrasion resistance
- high cut and tear propagation resistance
- colour red, non-marking, non-staining
- excellent mechanical and chemical connection with the wheel centre

Wheel centre:

- cast iron

Other features:

- high chemical resistance to many aggressive substances
- operating temperature: -20 °C to +70 °C, temporarily up to +90 °C, reduced load capacity over +40 °C

W134 Super Heavy Duty Castor Wheels

Details	
Part number	16100038
Number of wheels	2
Wheel Dimensions	400 x 100 mm
Maximum Load Capacity	7 Tons

Details	
Part number	6998038
Number of wheels	6
Wheel Dimensions	200 x 100 mm
Maximum Load Capacity	10 Tons

WH207 Series

Aluminium Die Cast Insert with Cast Polyurethane Tread Wheels

550 - 800 kg

Tread and tyre hardness

92 Shore A

Smooth operation / floor preservation

good

Rolling resistance

very good

Wear resistance

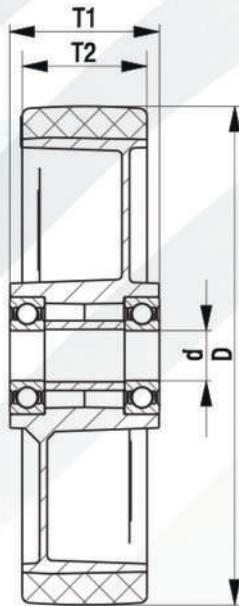

excellent

Wheel centre:

- die-cast aluminium
- Other features:
- high chemical resistance to many aggressive substances
- operating temperature: -20 °C to +70 °C, temporarily up to +90 °C, reduced load capacity over +40 °C

PU Tread:

- high-quality polyurethane elastomer, hardness 92 Shore A
- low rolling resistance
- high abrasion resistance
- high cut and tear propagation resistance
- colour light brown, non-marking, non-staining
- excellent chemical connection with the wheel centre

WH202 Series

Aluminium Die Cast Insert with Overmoulded Black Rubber Tread Wheels

400 - 500 kg

Tread and tyre hardness

65 Shore A

Smooth operation / floor preservation

very good

Rolling resistance

very good

Wear resistance

good

Wheel centre:

- die-cast aluminium

Other features:

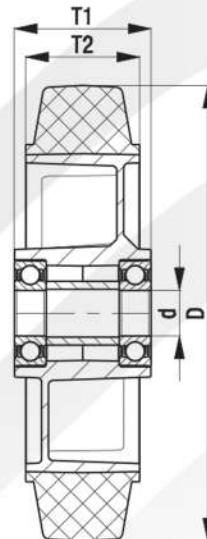

- high chemical resistance to many aggressive substances

- operating temperature:

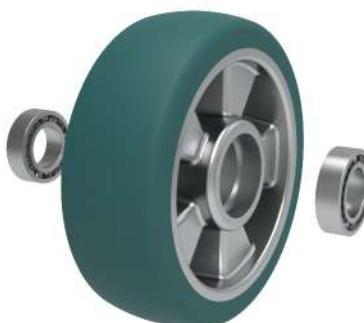

-20 °C to +70 °C,
temporarily up to +90 °C,
reduced load capacity
over +40 °C

Rubber Tread :

- high-quality elastic solid rubber in smooth rolling quality, hardness 65 Shore A
- very good operational comfort
- very good floor preservation, low-noise operation
- low rolling resistance
- colour black
- vulcanised onto the wheel centre

WH132 Series

Cast Iron Insert with Overmoulded Black Rubber Tread Wheels

100 - 1500 kg

Tread and tyre hardness

75 - 90 Shore A

Smooth operation / floor preservation

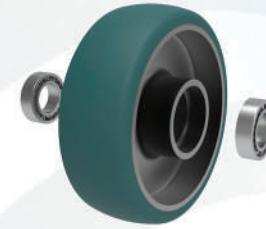

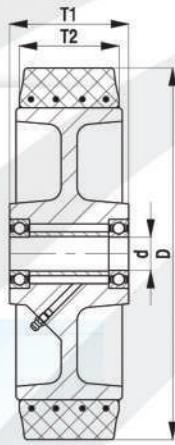

very good

Rolling resistance

very good

Wear resistance

good

Grey, non-marking
rubber version available

Tread:

- high-quality elastic solid rubber in smooth rolling quality, steel-wire reinforced, hardness 75 - 90 Shore A
- very good operational comfort
- very good floor preservation, low-noise operation
- low rolling resistance
- colour black

Wheel centre:

- rugged grey cast iron
- with grease nipple

Other features:

- chemical resistance to many aggressive substances, except oils
- operating temperature: -20 °C to +80 °C, temporarily up to +100 °C, reduced load capacity over +60 °C
- wheel centre is approximately 4 mm wider than the specified wheel width

WH131 Series Cast Iron Wheels

200 - 3600 kg

Tread and tyre hardness		180-220 HB
Smooth operation / floor preservation		sufficient
Rolling resistance		excellent
Wear resistance		excellent

Wheel:

- rugged grey cast iron, hardness 180-220 HB
- with grease nipple
- extremely low rolling and swivel resistance
- outstanding wear resistance
- machined tread and edges

Other features:

- chemical resistance to many aggressive substances
- operating temperature: plain bore version:
-100 °C to +600 °C
ball bearing version:
-20 °C to +350 °C
- consider the surface pressure on sensitive floors due to high point loads
- provide adequate lubrication on a regular basis for plain bore version
- To be lubricated according to the application temperature

WH198 Series

Polyurethane Rollers for Pallet Trucks

400 - 900 kg

Tread and tyre hardness

95 Shore A

Smooth operation / floor preservation

satisfactory

Rolling resistance

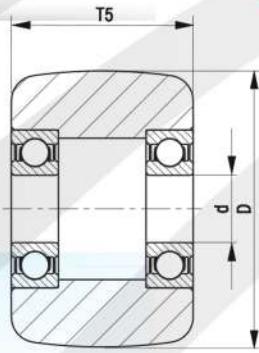

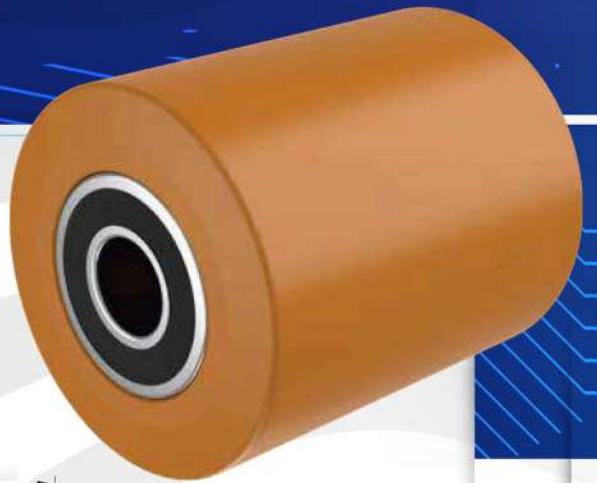

excellent

Wear resistance

good

Tread:

- high-quality polyurethane elastomer , hardness 95 Shore A
- low rolling resistance
- high abrasion resistance
- high cut and tear propagation resistance
- colour red, non-marking, non-staining
- excellent mechanical and chemical connection with the wheel centre

temporarily up to +90 °C,
reduced load capacity over +40 °C

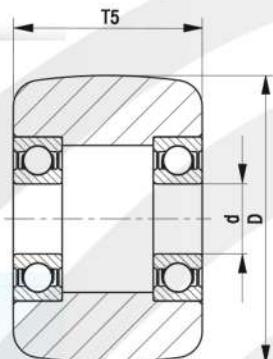

WH189 Series

UHMWPE Rollers for Pallet Trucks

450 - 1,350 kg

Tread and tyre hardness		63 Shore D
Smooth operation / floor preservation		satisfactory
Rolling resistance		excellent
Wear resistance		good

Wheel Details:

- high-quality UHMWPE, impact resistant, hardness 63 Shore D
- very low rolling resistance
- easy operation on smooth surfaces
- high abrasion resistance
- colour natural white

Other features:

- high chemical resistance to many aggressive substances
- operating temperature:
-20 °C to +80 °C,
reduced load capacity over
+35 °C

Notes

Starline Product Information

All of the information about Starline products in this catalogue must be taken into consideration when evaluating the liability and obligations of the manufacturer regarding its products.

The manufacturer will not be liable if this information is not complied with.

1.0 Product information and intended use

Wheels and castors are defined as components that are exchangeable and can be attached to units, furniture, transport systems or similar products to render them mobile.

This product information relates to wheels and castors, particularly passively-steered castors (swivel castors), for vehicles and equipment that are temporarily moved by hand (objects) at no faster than walking pace (4 km/h) and not for permanent operation.

Within the context of this product information, wheels and castors are used in the following areas:

Residential:

- e.g. seating, domestic furniture Services sector:
- general services, e.g. trolleys, office furniture
- hospitals, e.g. hospital beds

Industrial:

- e.g. transport units for medium and heavy loads

Intended use includes proper installation:
a) The product must be fastened to the object at all available points.
b) The object must be adequately stable at these points.
c) The installation must not impede or alter the functionality of the product.

d) Swivel castors must be installed in such a way that they pivot around a vertical axis.
e) Fixed castors must be installed in such a manner that their wheel axles are aligned.
f) All castors on an object must have the same mounting height. In case fixed castors are also fitted, only the castors recommended by the manufacturer for this purpose may be installed.

g) Wheels made of thermoplastic polyurethane (TPE) contain oil and can cause contact discoloration on sensitive surfaces.

Special versions must be used for wet rooms, applications in the vicinity of the sea, equipment exposed to the elements or in aggressive environments that lead to increased corrosion.

Special versions must be specified when products are used in a temperature range that is outside of the normal range for the standard products in this catalogue. Standard products must not be exposed to the rated load under these conditions.

he wheel, bracket, brake and axle options form a single functional unit. Starline only assumes liability for original products. Clients must take all possible loads into consideration when selecting castors. If they are not taken into consideration, additional safety factors should be used.

2.0 Incorrect use

The following situations are some examples where wheels and castors are being used incorrectly:

- a) The wheels and castors are used to carry loads in excess of the maximum load capacity in the catalogue.
 - b) The product is used on an unsuitable and uneven floor.
 - c) The product is used at temperatures that are too high or too low.
 - d) A unit is forcibly moved when the brake is activated or if the brake is used to slow down.
 - e) The product could be affected by particularly aggressive substances.
 - f) The product is affected by unusually severe loads as a result of impact or falls.
 - g) Foreign bodies could penetrate the press-on band.
 - h) The wheels and castors are operated at an excessively high speed.
 - i) Changes are made that were not approved by the manufacturer.
 - j) The wheels and castors are exposed to mechanical damage due to external factors or a collision.
 - k) Application of excessive lateral forces.
- The locking of our locking casters of all series is not intended for securing transport and loading in trucks, cars or similar means of transport. Violation of this instruction may result in damage to the locking function.

3.0 Product performance

If no specific information is provided about product performance in our catalogues, brochures, service descriptions, etc., you must contact us to determine if our wheels and castors or their components meet your requirements.

Please refer to the relevant DIN, ISO and EN standards for guidance.

Differing from the standard approach for wheels and castors, the brake forces of castors with brake systems are designed to ensure the optimal balance between high brake forces and low actuation forces.

4.0 Product maintenance

Recommended annual maintenance / inspection:

1. Lubricant should be added once a year for products with a grease nipple until a small amount of grease comes out of the bearings. We recommend using a multi-purpose

calcium complex based grease with a temperature range of between -30 °C and 140 °C. We recommend using a different grease if the product is used in different application conditions.

2. Check that all of the screw fittings are secure.
3. Check that the wheel, swivel head, lock, directional lock, brakes and other options are functioning properly.

4. Check the play of the wheel bearing and swivel head.
5. Check the air pressure of pneumatic tyres in accordance with the Starline Catalogue.

6. Inspect solid rubber tyres and treads for wear and abrasion.

We recommend performing the above measures more frequently if you are using the products in non-standard application conditions.

Cleaning agents may only be used if they do not contain any substances that may cause damage or corrosion.

Castors and their components must be replaced as soon as they start functioning incorrectly.

5.0 Obligation to provide

Information and instructions

In order to comply with our obligation to provide information, instructions and maintenance guidance in, we provide the following:

- for retailers: catalogues with product and user information
 - for users: product and user information
- In order to make sure that wheels and castors function properly
- Retailers are obliged to comply with this product information (see 1.0-4.0) and the user information.

Diagrams, drawings, dimensions, etc. are subject to change and are therefore provided on a non-binding basis.
